

PROSPER

What is PROSPER

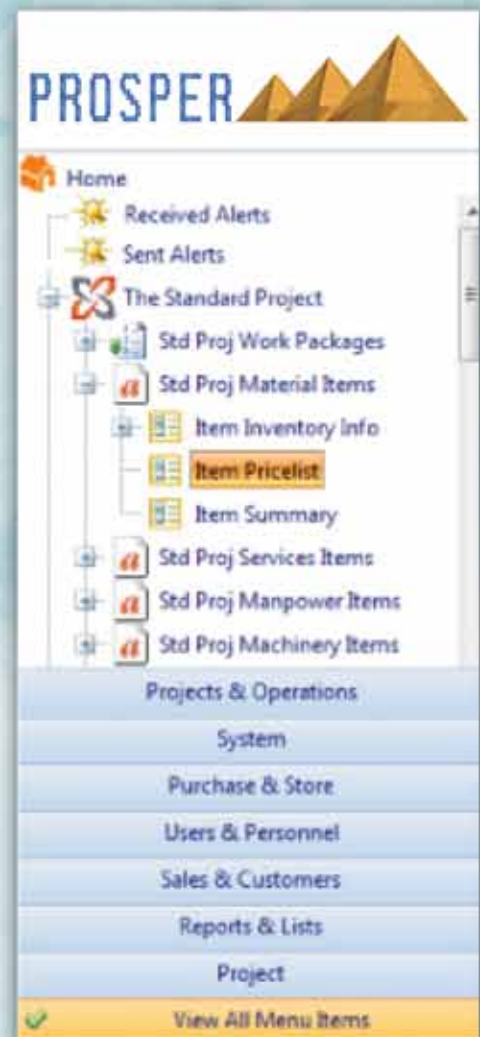

Prosper is an enterprise oriented platform used to manage, streamline, and enhance business processes in a web environment. It manages projects for medium and large companies in the contracting, construction and real estate development sectors.

With Prosper you can manage all project documents from the early tendering till the final delivery and maintenance stages, including:

- Tenders
- Estimates and Bills of Materials
- Offers / Proposals
- Requests For Proposal
- Sub-Contracts / Orders
- Work Progress / Timesheets
- Site Requisitions
- Purchase Orders
- Technical Drawings
- Correspondences
- Progress Reports
- Submittals / Claims
- Delivery Vouchers
- Invoices / Payments
- ...

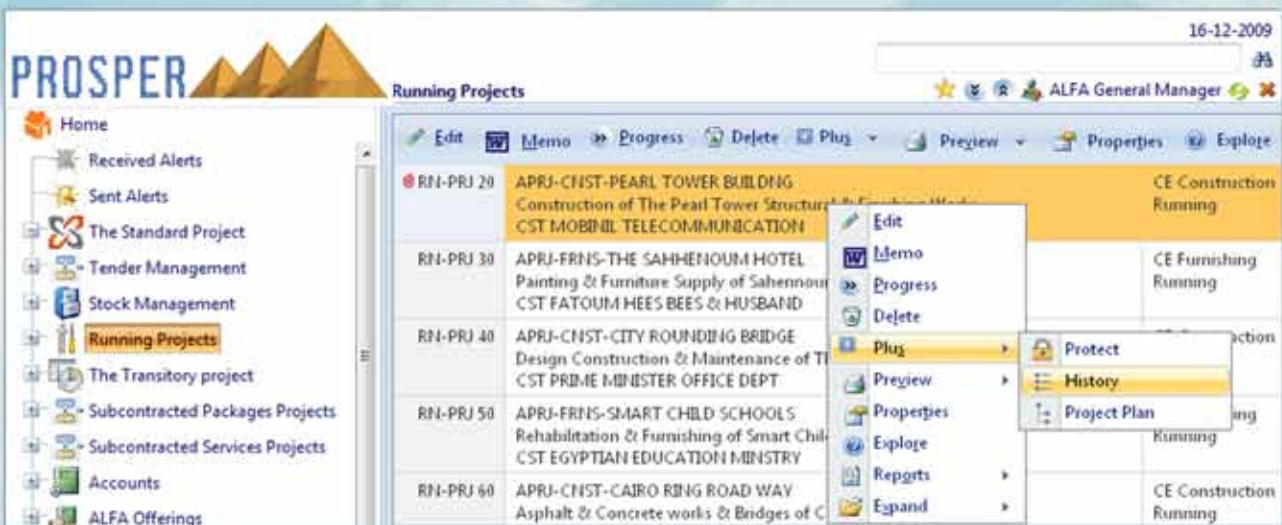

Your Benefits

- Completely Web based – Secure interaction with your enterprise system from anywhere in the world
- Lower Total Cost of Ownership – Simple intuitive user interface saves IT training costs.
- Improve Project Collaboration by Connecting your Managers, Architects, Engineers, Consultants and Subcontractors online.
- Access to centralized information – all your data is stored in one secure place with no duplicates.
- Increased efficiency – streamlining of business processes increases efficiency and Enables your organization to obtain an ISO or similar standards certification.
- Systematically captures 'Knowledge' on Projects, Customers, Vendors, and Employees making it easier for the organization to 'Learn' from previous projects even after various project members leave the company.
- On the spot Reports – a rich set of reports on document, project, line of business, and/or organization levels catering for any data analysis and mining needs across the company.
- Data import from third party applications and export of any document, project, or item to any third party application.

With PROSPER

- Manage multiple organizations with multiple projects simultaneously.
- Maintain a history of actions performed on any document and multiple versions of every document.
- Manage multiple users from office employees, to site employees, to company executives.
- Track projects efficiently and monitor various activities within your organization through on-the-spot reports at various enterprise levels.
- Improve role-based dynamic processes by managing the flow of real documents within all projects.
- Find any information in the database easily through Google-like search.
- Protect important data from unauthorized users.
- Use Microsoft Office Word, Excel, Outlook and Project to manage projects from a familiar desktop interface online and offline.
- Make Project correspondences and documents available to all authorized team members.
- Your staff can configure the system to reflect your needs and to apply changes easily from the same intuitive user interface without any source code change and without our intervention.
